LESS WEIGHT AND MORE FLIGHT

by
G. Burridge, BSRA

For those ROUND ROBIN readers interested in anti-gravitics, this article will somewhat supplement "Toward Flight Without Weight", appearing in ROUND ROBIN for September-October, 1956, Vol. XII- No. 3. The herein-contained is mostly background material which will help to round out the "Interavia" article.

Additional information relative to this matter, and to Townsend Brown, its exponent, continues to flow into our hands. Very recently we learned, quite by accident, that Brown gave a demonstration in Los Angeles, of his "flying disks" about two years ago. This demonstration was presented to a group of scientists and engineers from the Lockheed Aircraft Company. At present, we are gathering data concerning this demonstration, and we hope to be able to present it to ROUND ROBIN readers in the near future.

Another approach to anti-gravitics may be through the possible application of the Biefeld-Brown Effect. The Biefeld-Brown Effect is electrical in nature. It may be properly described as the inclination of an electrical condenser to move toward its positive pole when charged, if not physically restricted, and this seemingly despite the principle that every action generates an equal reaction! The movement toward the positive pole of the condenser appears to be made regardless of which plate of the condenser is made the positive pole, or which side of the condenser dielectric is energized by the positive pole.

The "Effect" under discussion is believed to have been first observed and cursorily studied by Dr. Paul Alfred Biefeld, professor of astronomy and physics, Denison University, Granville, Ohio, sometime prior to 1923.

However, movements in alternating current electrical condensers, when initially charged, were observed by this writer, and others, between 1919 and 1925. These condensers were used in generating ultra-high frequency currents. The observations were made when this writer was assisting in experiments with alternating current pressures of 1,000,000 volts, oscillating at 750,000 cycles per second. At that time, those in charge of the experiments were more interested in other phases and phenomena, and believed the starting movements manifest by the condensers to result from resonance set up in the apparatus by the 60-cycle feed currents. We believe notes were made on this subject at the time, by the principals conducting the experiments, but they are now long dead,

and if their notes have survived, we have no idea of where they may be. We cite this instance, not to drain any possible credit from Dr. Biefeld or Mr. Brown, but rather to possibly substantiate in some small degree the existence of such a phenomenon or Effect.

About 1923, it is believed, Dr. Biefeld made known to Mr. Thomas Townsend Brown, then a student at Denison University, some, if not all of his -Biefeld's - observations relative to these peculiar condenser phenomena. Mr. Brown, as a student, appeared keenly interested in them, as well as in other then unestablished theories and postulates in the physical-electrical field. It was Mr. Brown, rather than Dr. Biefeld, it is believed, who named the Effect. And it has been Mr. Brown who has subsequently carried on all experimentation with it.

It appears the Effect's intensity is determined by several factors. One of these is the capacity of the dielectric to store electrical energy in the form of electric stresses or flux. Like-sized areas of different kinds of dielectric materials store varying amounts of flux. "K" symbolizes this dielectric constant. The higher the K-rating of the dielectric, the greater the reported Biefeld-Brown Effect.

Another important factor is the degree of proximity at which the condenser plates may be set, or the allowable thinness of the dielectric used, yet obviating puncture of it by the electrical charging force. The thinner the dielectric, or the closer the plates, the more extensive the Effect seems indicated.

An additional factor is the size, or total area of the condenser plates themselves. The larger the number of square units of measure the plates contain, the increasing assumption of the Effect. Thus, the shape of the plates is significant, and gives the circle an added advantage!

The voltage potential which is applied to charge the condenser plates, and through them, the dielectric, is another considerable factor. As the intensity of this pressure rises, the more of the Effect would appear to follow.

A final factor lies in the mass of the material making up the dielectric. It seems the greater the mass, the larger the Effect evinced.

Obviously, the highest desirable quantity of each of these factors cannot be obtained in any single practical application. As in all else, probably a compromise best suited to each specific problem presented for solution must result.

Empirical experiments report a condenser suspended by a cord, and free to move in any direction except downward, will veer, when charged, from a vertical position to an angular one in the direction of its positive pole. If this experiment is arranged to operate vertically, definite antigravitic effect appears observed. It would thus

seem the electrical condenser may well bear the same relation to electrogravenitics as the coil of wire bears to electromagnetism!

We may conclude, on the face of these experiments, and others reportedly conducted by Mr. Brown over the last thirty years, the application of this Effect would be better suited to astronautics than to power production.

Thus, as we will readily envision, by a not too complicated electrical arrangement, one which would allow the change of the positive pole in strategically positioned condensers throughout an astronautic vehicle, its complete movements could be controlled. Recalling that a circle contains the largest number of square units for any given dimension over all other plain geometrical shapes, it would appear such an aero-astronautic device as would use this form of motivation most efficiently, should be disk-shaped!

By making the whole disk-shaped astro-nautiform a complete con - denser, electrically arranged for multi-change of its positive pole placements, it could yield to minute control.

Townsend Brown has already developed models of flying objects which are believed to closely follow the above conditions. Some of his models are reported, by eye-witnesses, to be as large as 30 inches in diameter. These fly with free bearing, but are tethered around a stationary pole.

Townsend Brown is reported to have been a member of several large, well established scientific societies for many years. He has been employed in consulting positions by several large aircraft manufacturing companies, both here and abroad, and is now so employed. He is listed as having held various commissions with the U.S. Navy in connection with scientific work. Brown is a native of Ohio, having been born in Zanesville, in 1905.

Antigravity devices appear to be on their way to perfection. Once practically achieved, such a vast horizon stretches before mankind he will need new eyes to see it. With new eyes - new thoughts. With new thoughts - new lives. Let us hail the day.

BROCHURES by Physicist C.F. Krafft: "THE ETHER AND ITS VORTICES", - and - "GLIMPSES OF THE UNSEEN WORLD", -- The existence of the ether is vital to a correct interpretation of the aeroforms. ("THE ETHER AND ITS VORTICES" (about 65 pgs), has been favorably reviewed by a national magazine. -- Order from B.S.R.A., or from author: Rt. 2-- Box 687 -- Annandale, Va. Price, $1.00 for each brochure.

"APOLLONIUS OF TYANA", by Alice Winston. (An Akashic reading) -- - 124 pgs. - Price: $2.00.

THE LUMINOSITY OF FLYING SAUCERS

by
C.F. Krafft

Flying saucers are frequently, but not always, luminous. Their luminosity is in some manner related to their acceleration, and when it does appear, it is uniform over the entire surface, except for a possible dark spot or band. It has been suggested that their luminosity may be the corona effect of high voltage, because if they use ionic propulsion, then it may be expected that the entire spaceship will become electrostatically charged. That would be especially true if the propellant is some kind of "supermatter" which is itself an electrically neutral material, but which decomposes, in a manner similar to radioactivity, into large numbers of positive gaseous ions.

Supermatter differs from ordinary matter in that the atoms of supermatter are joined to one another by direct core-to-core connections, either with or without the usual chemical valence bonds, Such direct connections between the cores of the atoms would be obviously impossible under the prevailing nuclear theory of atomic structure, and the dogmatic adherence of the physics profession to the nuclear theory is probably the main reason why supermatter with all its interesting possibilities has not yet been discovered, and interplanetary travel not yet accomplished.

Since there are many different chemical elements from which supermatter could be prepared, it should be possible to produce many different kinds of supermatter, but only some of these would be suitable for ionic propulsion. Other kinds when used as a covering or coating for the spaceship could serve as a gravitational and inertial shield so as to render everything inside the spaceship immune from gravitational and inertial forces, and the supermatter that functions in this manner may become heated to incandescence during this process so as to render the entire spaceship luminous. The coating of supermatter could be lined on its inner surface with heat insulation so as not to burn up everything inside the spaceship.

For use as a spaceship coating, the supermatter should be a very refractory material with a high melting point, and should not be very active chemically. It should be made from a monovalent metal because in a polyvalent metal the multiplicity of valence bonds would prevent effective core-to-core connections. The most suitable materials to use for this purpose would appear to be silver and copper.

The action of gravitational and inertial forces is confined almost entirely to protons, and the ether-vortex proton consists of a pair of vortex rings in rolling contact with outward polar flow. Since these

vortex rings are elastic structures, the outward polar flow will not be uniform and continuous but will occur as puffs or pulsations, similar to the smoke-rings produced by tapping the rear of a cardboard box with a hole in its front wall. The ether in these puffs or pulsations will not flow entirely along radial lines, but some of it will also flow in transverse directions, just as in light waves where the displacement is likewise transverse. Such transverse displacements, if of sufficiently high frequency, may still be able to pass through solid metal where the atomic cores are spaced apart from one another, but would not be able to get through a coating of super - matter where the atomic cores are in direct connection with one another so as to form a continuous network or lattice made entirely of core material. Such a supermatter coating would also protect the pilots of the spaceship against the injurious effects of cosmic radiation, which cannot be done effectively by shielding with ordinary metal.

In order to function as such an inertial and gravitational shield, it is not necessary for the supermatter coating to be impervious t o both the inwardly and the outwardly moving ether. Since the ether is incompressible, the volume of ether that is taken in by the space - ship must be equal to the volume that is sent out, and vice versa. Even if the supermatter coating is freely permeable to the incoming ether, it would still be an effective gravitational and inertial shield if it stops only the outwardly moving puffs that emanate from the protons. But what does then become of all these outwardly mov - ing puffs if they cannot escape? They probably spend themselves on the supermatter coating of the spaceship so as to heat up this coating and at times make it luminous.

NATALLI speaks his mind:

"Be assured, no nation is going to attack another with nuclear weapons.

"Anyone who says there is no danger from what you call 'fall-out' is either a liar or an ignoramus. Its effects are cumulative even in the smallest quantity. "TV", radio, X-ray apparatus, radar and other equipment contribute their share. . . . It will not b e enough, for any one nation to discontinue the bomb experiments -- ALL countries must cooperate in this. About the "clean bombs" -- It is not yet known or at least admitted that there is a delayed radiation from these. So far as I know there is NO screen or protection against the 'fall-out' radiation . . . This situation is driving your neurotics into religionism and the religionists are getting more neurotic.

"When your planet does come to an end, ages hence, it will be - come either a floating ice-field, or, in a few seconds, a Nova, along with the rest of the solar system." (Dictated to M.P., July, '57)

DOWSING OF STRAIGHT - LINE FORCES

by
O. Reynolds, BSRA

- PART II -

The next experiment is with two parallel lines of equal length. In this case the lines are three inches long, the distance between them being one inch.

In all of these experiments it is better to use two identical figures -- one on which the dowsing is done, the movements of the pendule being drawn on the other figure. If this is not done the pendule will be affected by the lines showing the movements o f the pendule.

When two parallel lines three inches long are drawn one inch a- part and the pendule is held over a point midway between the two lines and midway between their two ends, the movement of the pen- dule is in a straight diagonal line from one end of one line to the opposite end of the other line, alternating between these two diag- onals. When held at any other point between the two lines or between an extension of the two lines, the swing is parallel to the t w o lines.

By exploration the field outside of and parallel to the t w o lines which will correspond to field A in Figure 5 will be found to be somewhat similar to that of the single line. The limits of this field appear to be determined by a line that starts at the midway point of the opposite line and touches the tip of the other line and then is extended on. The length of this extension has n o t been determined, but apparently it is, at least in part, deter - mined by the sensitivity of the operator.

The fields B and C in Figure 5 appear to be replaced by a sin- gle field in which the pendule swings in a straight line t h a t alternately points to the mid-point of the opposite line and then swings toward the far end of the opposite line. These movements are shown in Figure 7.

The ratio of the length of the two lines to their distance a - part is three to one. Their length was increased by nine sixty- fourths inch, making the ratio 3.1406 to 1 which is approximately the pi ratio. There was no change in the movement of the pendule except at one point. At the center of the area between the two lines the pendule began swinging in a long narrow oval, the long

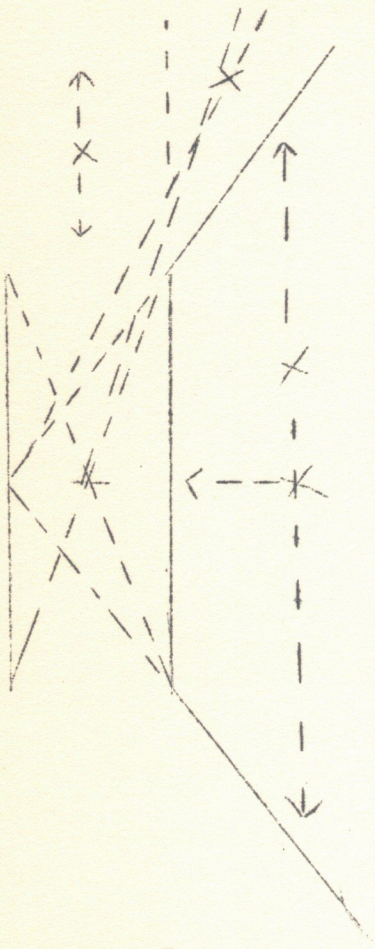

Fig. 7

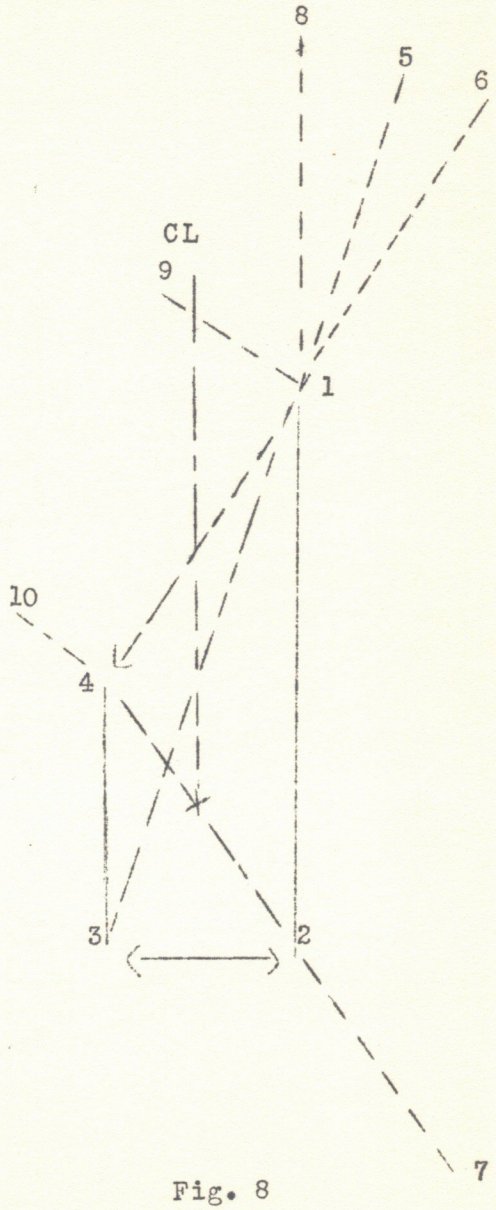

Fig. 8

Text on page 7 -

axis of the oval pointing to opposite ends of the two lines. The long axis of the oval gradually worked in a clockwise direction until it pointed to the other two diagonally opposite ends of the lines. By this time the oval motion had become more nearly circular, the long axis having shortened while the shorter axis had increased in length. The pendule finally changed from a slightly oval motion into a circular motion. This circular motion was maintained by the pendule as long as it was held over the center of this area.

When the two parallel lines are of unequal length there is considerable change in the movement of the pendulum. In Figure 8 one line is twice as long as the other line. When the pendule is held at x the swing is between # 2 and # 4. In the triangle 1-2-4 the movement is parallel to the two lines. In the triangle 2-3-4 the movement is between point 2 and the line 3 - 4. The point on line 3-4 toward which the pendule swings depends upon where it is held in the triangle 2-3-4. It varies from the diagonal 2-4 to a swing straight across from 2 to 3.

Lines 1-5 and 1-6 are extensions of lines 1-3 and 1-4. Along these extensions there is no movement of the pendule.

In the area enclosed by lines 5-1-2-7 the swing is parallel to line 1-2. To the left of line 4-3 the swing is parallel to the line except opposite its mid-point, where the swing is at right angles to the line.

In the area enclosed by lines 8-1-5 the swing is toward point 4. Along lines 1-8 there is no movement of the pendule. Lines 1-9 and 4-10 are drawn at right angles to lines 4-1. In this area the swing is at right angles to lines 4-1.

FOR YOUR INFORMATION: - BSR ASSOCIATES --

"THE FLYING SAUCER REVIEW" for July-August 1957 (Brinsley le Poer Trench, Editor; 1 Doughty St., W.C. 1, London, Eng.) Vol. 3 - No. 4, page 14, prints some interesting (tho' disappointing) data, under the heading: A Statement of Fact, dealing with a "new" magazine, "Flying Saucers from Other Worlds"; published by Palmer Publications, Inc., 806 Dempster St., Evanston, Ill, USA, with editorial offices at Amherst, Wisconsin. "This new magazine," says the editor of F.S. REVIEW, "has seen fit to print in their first issue (being sold on the newsstands) almost 25 pgs of original F.S. Review material, with no acknowledgment of any kind (my italics, ML).

Pages 80-81, also, omit entirely all mention of the F.S.R. from their review of "other flying saucer clubs & journals". The statement about the 25 purloined pages is supported by itemized quotations & references. This is the most flagrant example of straight-and - crooked literary thievery which has come to my attention in ten years of dealing with minor publications. ML

"THE RETURN OF THE DOVE"

(The story of the life of Nikola Tesla, scientist, and the part his inventions will play in ushering in the New Age. Much of the data for this forthcoming book has been supplied through transcripts received on the Tesla set, a radio type machine invented by Tesla in 1938 for inter-planetary communication. Tesla died in 1943, and his engineers did not build the set until after his death. It was placed in operation in 1950, and since that time the Tesla engineers have been i n close touch with space ships. Presented here are some pertinent facts which will be treated in full-scale form in the book - Return of the Dove - but offered at this time on account of the extremely critical world situation engendered by the continuanae of nuclear tests).

(Note by the R.R. Editor: The foregoing note comes to us with - out signature, as prefatory to the synopsis which follows. The last page of the manuscript carries the line: Copyright 1957 by Margaret Storm. The B.S.R.A. has no "inside" information about any persons, apparatus, or communications referred to, and presents the article by permission, in the belief that it rings true with many known facts and gives a comparatively new slant on a very grave planetary condition. Ml

- . - . - . - . - . - . - . -

It is inspiring indeed to know that all men and women of good will stand united around the world today to aid the planet Earth in its darkest hour. There is little time left -- certainly no time for despair, for grief, for panic, for remorse. There is only time for Light, for Understanding, for Truth, for divinely-inspired Action. We are no longer called upon to save all humanity or to save a civilization; there is not time enough for that just now. Today we are called to the practical task of saving this whirling globe, our lovely home, our planet Earth, from the destructive fury of madmen.

Even 2000 years ago this present impasse, this present battle between good and evil, was anticipated by the Forces of Light. To meet our need, They arranged for the birth of Jesus, for His teachings, for His guidance.

The Forces of Light include cosmic Beings, angelic, solar and planetary Entities, Masters of Wisdom and other Initiates, who have evolved beyond the ordinary concepts of good and evil in which human beings are immersed. But because of Their high point in evolution, Their position in the Hierarchy of Initiates, the Enlightened Ones, whether resident on this planet, or visitors from outer

space, cannot force Their help upon us, for we are men and women of free will. We are not automatons; we are free to choose; we are free to accept good or evil, or a little of each. We are free to support the Forces of Light, or the forces of darkness, but we must also understand that this freedom obliges us to accept the full responsibility for our actions. Vicarious atonement is an escapist's dream; it is not a cosmic fact, but belongs to the realm of astral glamour.

Since the planet Earth is in such dire need at this time, certain Interplanetary Forces have come to our aid. They have sent to this planet, from other planets, during the last hundred years, s i n c e 1856, upwards of ten million trained, experienced individuals, spiritually and intellectually far in advance of earth people. A shepherd, a human being, is placed in charge of a flock of sheep. It is utter folly to presume that earth people can be safely placed in charge of other earth people. The fact that this kind of human dictatorship always ends in tyranny, whether in a home or in a nation, is a lesson we do not seem to learn. But because we have free will we a r e permitted to play this game of superman in order to keep our little egos satisfied. In actual practice, however, we are never left to our own devices for even an instant. The Divine Shepherd always has His watchful eye on His wayward sheep, but He stays in the background, behind the scenes, while we cavort about with our big firecrackers going boom-boom!

Lately this childish playing with fire has become too rough, too dangerous, until now it threatens to exceed the limits of tolerance within a very few weeks. If that were permitted the atmosphere would become too contaminated to breathe, and death would settle over the planet - death to the human, the animal, the vegetable and the mineral kingdoms. But death would likewise come to the more than ten million persons or their descendants who have been sent here from other planets to aid us -- unless the space people came in their space ships and rescued their own. This is precisely what the space people are prepared to do, if because of our stubborn resistance to their demands for brotherhood, they are forced to abandon their efforts to save the earth's population, and concentrate only on saving the globe itself as a base on which to foster a new race.

The space people have said that they frequently destroy certain nuclear installations and devices in this country and in o t h e r countries, for otherwise we would senselessly blow our planet t o bits, and it would become an asteroid belt. This has already happened once in this solar system, and the individuals from other planets who are now policing the earth are well aware of these historical and present facts.

It is now generally known that these visitors from outer space arrive in space ships which we call flying saucers. They frequently land, and they frequently contact persons who live on this planet. Please take note of that expression: persons who live on this planet. It is extremely doubtful if space people have ever contacted a genuine earth person -- that is, an individual who has evolved to his present point through thousands of incarnations on this one planet. The hundreds of persons contacted by the space people are probably all from other planets, or are direct descendants of the ten million visitors who have been infiltrated into the earth's population since 1856. Many, many persons have come here from other planets during thousands and thousands of years in the past, but our immediate aid which the Forces of Light are concentrating on this planet today comes from the infiltration dating from 1856.

These visitors have been infiltrated in many ways. Some were brought here as babies and placed in carefully selected homes, o r permitted to grow up as foundlings but always overshadowed by protective influences; many came in as souls and took birth on this planet; others were brought in on space ships and conditioned to live in our atmosphere. In recent years giant space stations have been so placed as to orbit the earth, and installations have been made on the moon so that it serves as a space station. On these space stations, earth atmospheric conditions can be simulated, so that visitors may undergo conditioning and then be landed on the earth. Millions of space ships are kept in readiness on t h e s e space stations, so that the police units and scout ships may take off on their appointed rounds at any time.

The space around the earth is constantly policed, and in addition has an "airtight" mechanical patrol, similar to, but far more effective than radar. The purpose of this mechanism and the police activity far out in space is not to keep us in, but to keep certain un - desirable entities out. Although virtually all evil in this solar system is confined to this one planet, earth, there are many other solar systems which also have centers of evil, some inhabited b y entities much more powerful than those black magicians and their black disciples who constitute our forces of darkness. The Army of Light which protects this solar system is well aware that earth people are so low on the ladder of evolution that we cannot even solve our own problems, so They try to prevent any further evil from reaching us. We might as well face up to the fact that such a task is not easy, and many space people, especially Martians, have given their lives to defend us from these "ships of darkness" which have come winging their way across space for the purpose of enslaving us completely.

There is another phase of space ship activity around the earth with which we are more familiar -- the protective phase. Day and

night, night and day, the atmosphere we breathe is being constantly cleansed of radioactivity. It has been said, by the space people, that all life would have ceased to exist on the earth about four years ago, had it not been for this constant cleansing of the atmosphere. This cleansing is handled in several ways. At intervals a space station orbits the earth and bombards it with rays which counteract contamination. The green fireballs which are so often seen, are manufactured on Mars, and sent hurtling to the earth from space ships. They cleanse the air close to the ground in areas where space ships, if they ventured on their missions of mercy, would be fired upon by our aircraft. However, in certain cases the flying saucers can be sent over areas where there are strong concentrations of radioactive particles, and these areas are decontaminated by rays beamed from the ships.

All of this free service by our space visitors is indeed gratifying, but it would be childish for us to assume that we can keep on playing with our big firecrackers just because the space people are courteous enough to come in and clean up the mess so that we can continue to breathe. There comes a time ---- and this is it! The space people have recently stated that under the Laws of Karma, or Cause and Effect, they cannot continue much longer to help people who refuse to help themselves. Their ultimatum is simple: we must stop all nuclear tests immediately; we must stop all warfare -- cold, hot, or lukewarm. We must no longer attempt to remain separative; we must ask, seek, and <u>receive</u> Divine help.

Human beings have free will, up to a point. That point is known as karma, or the effect of causes we have set in motion through our free choice. Death is a form of karma. No amount of free will can overcome death. Inasmuch as causes, nuclear causes specifically, have been set in motion, the effect is now upon us. The effect is disease and death -- death to all human life on this planet, and therefore death to animal, plant, and mineral life on which human life depends. For Divine Law must be fulfilled and the Law states that those who live by the sword must die by the sword.

However, karma may be offset, even at the eleventh hour, so the space people still hope that we will not permit this senseless, stupid tragedy to take place. Moreover, the ten million space people living here with us have invested so much of their time and effort in this salvage operation that they have set powerful causes in motion on behalf of the Forces of Light. This means that we can accept the effects of their causes, but if we do so we will have to conform to the pattern of brotherhood and peace which they insist upon instituting on this planet. Those who are not willing to conform, should this be the outcome, will then have to meet their individual karma of death.

The men and women from other planets have been infiltrated into our population to take care of this very emergency which is now upon us. They live among us, they work among us, they pray among us. Some of them are conscious of their origins and are in telepathic communication with space ships and space stations. Others have no conscious memory of their origins, but they faithfully perform their service to humanity because of their intuitive capacity.

At no time has an individual, a nation, or the race as a whole been called upon to solve a problem for which there is no answer. The answers have always been provided in abundance before the problem was posed. At the present time our problem is: How can we stop nuclear experiments; how can we cease all warfare; how can we openly receive our space visitors and profit by their guidance?

In 1856 this problem was so clearly anticipated by the space people that they provided one over-all answer for us. In order to make it as simple as possible for us, they wrapped it up, so to speak, in one seed that would grow, flourish, and spread its blessings to the far corners of the earth. They followed the pattern of Universal Law, of the Eternal Creator.

In that fateful year of 1856 a space ship set out from Venus on a mission to the planet Earth. As the ship neared the earth an event took place which was to change the entire course of scientific development on this planet. A baby boy was born on board the ship, and the space people gave him the name of Nikola. At midnight, between July 9th and 10th, the space ship landed in a remote section of an Austro-Hungarian province which is today known as Yugoslavia. The child Nikola was taken to the home of a young married couple, a man and woman of good will, as the space people described them. The tiny Venusian prodigy was entrusted to their care -- to the Rev. Milutin Tesla and his wife, Djouka. He grew up as their son, Nikola Tesla, a babe from Venus. His foster parents guarded well the secret of his birth, even when he later received world-wide recognition as Nikola Tesla, the superman. This secret was disclosed on September 26 1950, by the space people themselves, for they now desire that we understand more about the persons they have infiltrated into our population to aid us in our hour of need.

Tesla died in New York City during the night of January 7, 1943, and it was thought by many that his earthly work was finished. The forces of darkness rejoiced at news of his death which they considered was most opportune. The world was at war, and under pressure of this need, the patents of Tesla were considered as royal plunder. The very gifts of genius which had been intended to preserve us from wars engendered in darkness were used to satisfy the greed, the passions, and the hatreds of the evil forces.

But darkness never wins out over Light, and now, according to the space people, the real work of Tesla is about to begin, for it is part of the Divine Plan for humanity on this earth that we enjoy in full abundance the new way of life which Tesla's inventions will bring us. Tesla was just one man, just one Venusian, who lived on this planet for 87 years. He was a scientist in the field of electrical development. Yet his inventions alone, if developed, w i l l automatically solve every immediate need of humanity on the physical plane, leaving mankind free and at peace to develop his full soul expression.

Tesla's inventions, if developed, will make nuclear experiments obsolete; they will render warfare impossible, making each country safe within its borders, free to develop its particular culture in peace and harmony; they will make the present outmoded economic system unnecessary; they will make possible a two-day work week; they will open up interplanetary communication to everyone immediately; they will permit the space people to send us teachers who can train the entire population of this planet in every phase of art, philosophy, science, and Universal Law, known in this solar system. All of this and much, much more can be accomplished by the simple expedient of utilizing the inventions of Nikola Tesla.

And what can you do to further this project, this phase of the Divine Plan? You can demand, demand, demand that the inventions of Tesla be utilized. Ask and you shall receive. This is a Divine promise. Therefore, ask! Spread this word to the ends of the earth, this immediate answer to our immediate problem. If you can under - stand the technical aspects of these Tesla inventions, by all means study the writings on the subject, and inform yourself. But if your best efforts do not lie along scientific lines, then just seek to understand the desperate need of humanity for help in this hour, and know in your heart that help is at hand. Spread these tidings o f joy!

Those of you who are yearning to see space ships in the sky, to talk to the people in those ships, to receive messages, to receive comfort, assurance, and some guarantee of security, please stop and consider. There are thousands of space people here with us now, but if you complain that you do not know any of them, that you cannot recognize them, then find comfort in the fact that Nikola Tesla of Venus was with us on this planet, in a physical body, for 87 years; he is still with us today in his subtle body. He is a practical man who has devoted his life to the greatest salvage operation that we have known on this planet since the time of Jesus. Indeed, it w a s Jesus Himself who said that we, in our time, would do greater things than He could do for us 2000 years ago because of our limited knowledge then. Could Jesus have been thinking of us, the men and women of goodwill of 1957, who stand at the door and knock, knowing that we will find the answer within?

For remember that we, all of us together, must do these greater things. To meet the present urgency, the need to stop nuclear tests and all war efforts, Nikola Tesla drew up the plan, designed t h e necessary inventions, but he left all this to the people of t h e world as our God-given heritage. It is for us to demand the development of these inventions, not only in this country but all over the world. It is for us to utilize them. Tesla carried forward the first part of the development while he was here on earth in a physical body, but his efforts were constantly blocked by the forces of darkness, of ignorance -- so patiently he left us to carry out the plans when we were ready. We now have no choice but to be ready, for the very forces of darkness who plagued Tesla have now forced our hand.

- Part II -

Let us now consider just what is being done about the Tesla inventions, the attitude of the space people toward the Tesla project, and the scope of the inventions themselves.

So vast is the scientific field explored by Tesla that it is difficult to classify the work of this superman. He was not an inventor in the usual sense; he was a discoverer; the universe was his laboratory. To say that he harnessed electricity for use on a world scale is totally inadequate. On one occasion he was presented with a medal, a symbol of gratitude, together with a paraphrase of Pope's lines on Newton:

"Nature and Nature's laws lay hid in night:
God said, Let Tesla be, and all was light."

This was the man who envisioned a world-wide wireless power system, not for any one nation or group, but for all of God's children. He invented alternating current to replace the limited use of direct current, and then he harnessed Niagara Falls to supply electricity. At the age of 80 years, his wireless-power system was still to be developed, as today, but he did not resent the delay. "Perhaps I was a little premature," he said, "but meanwhile my polyphase alternating system continues to meet our needs to lighten the burdens of mankind and increase comfort and happiness. Just as soon as the need arises I have the wireless system ready to be used with complete success." Then he quoted a stanza from Goethe's"Faust":

The God that in my bosom lives
Can move my deepest inmost soul
Power to all my thought he gives
But outside he has no control.

Like the spaceman that he was, Tesla knew that he could only encourage us; he could not force his light upon us; he could only respect our free will. Nevertheless he knew that his polyphase system had made the power age possible, but he also knew that it had made World Wars I and II possible. Being a man of goodwill he sought to properly curb the mighty force he had unleashed in the world, so he invented, in 1935, an anti-war machine, as he called it. This anti-war machine could have been put into effect all over the world, and it would have made each country safe within its borders. It would have ended all aggression between nations. It would not have ended family and community squabbles inside national borders.... or would it? Perhaps. Who knows what course human evolution might have taken if, say, by 1935, all fear of warfare had been removed from the world?

There are those who will dispute this advantage: those who will say that we must not use a mechanistic approach in trying to solve our problems; that we must use only Love and Understanding. It is quite true that if men and women of goodwill could generate enough Love and Understanding, we could change the course of history at once. But in 2000 years our effort to align ourselves with the Christ-consciousness have been extremely feeble. So let us not despise a mechanistic approach which will allow us to lay down our weapons, and give us the leisure time to develop the educated heart of Love, the enlightened mind of Understanding. As the space people have quoted: "Do not count the teeth of a camel which has been given to you with love, but ride it with thanks in your hearts that you have a vehicle which will carry you safely through the hazards of the desert."

Remember too, that the space people have had vast experience in guiding other planets in other solar systems through emergencies exactly like the difficulty which faces us now. They estimate that even with their help and our unlimited cooperation, it may require about fifty years to complete the task of establishing God's kingdom on earth. They base this timing on actual results recently achieved in another solar system where the planetary problems were very similar to ours. However, they feel that we can probably progress more rapidly because we are far more developed along artistic lines, and therefore have greater imaginative and intuitive powers than our friends in the neighboring solar system.

So the Tesla anti-war machine was not utilized in 1935, nor by 1955, so the fear of warfare has not been removed from the world. Would you like to have the fear of warfare removed from the world now? Then go right ahead and demand your God-given heritage of human brotherhood. Do not listen to the dark mutterings of those so-called authorities who claim that we must continue to hate, to support certain separative political policies.

If we would have brotherhood on earth we need only support the poli - cies of the Creator and Universal Law. The gates of hell shall not prevail against the Forces of Light.

In the interim period, between war and peace, you can demand that human security be preserved, human dignity and human rights assured, by making all national borders secure by the installation of the Tesla anti-war machine. But your demands will have to be loud, very loud indeed, for the forces of darkness do not like to hear t h e sound of the voices of men and women of goodwill. Remember, too, that certain governments of the world were offered this invention by Tesla himself, away back in 1935, and his offers were spurned. Did you hear about that little incident, my friends? Did your newspapers inform you? Of course they didn't. There was a world blood bath scheduled. Great fortunes were to be made. Nothing could interfere with that.....nothing, that is, except the voice of the people themselves. But uninformed people are silent people, and so the bloody course of history, which might have been changed, was not changed.

There is another reason why the people were not told about t h e anti-war machine. Tesla had invented polyphase alternating current in his youth, as a sort of stop-gap, so that people everywhere could have the immediate use of electricity, since direct current could be used only within an area of one square mile around each power station. Tesla did not intend that we should still be using an old - fashioned, complicated system of wiring and electrical distribution in 1957. But he first had to invent a wireless method. He did this and the radio was an offshoot, a by-product of Tesla's experiments.

When he did come forward with his world wireless power system, the forces of darkness, securely entrenched behind the world's financial interests, would have none of it. One of the greatest financiers in the United States listened to Tesla himself describe the glories of his invention, and then the financier dismissed the whole subject as impractical because, as the money baron pointed out, there would be no way of making money off the people, if the people could have all electricity they wanted by merely sticking up a little antenna on their homes, factories, or office buildings. This astute financier pointed out that under the present system the manufacturers of wires, poles, and electrical installation equipment of all kinds, could make fortunes, and in addition the electricity could b e metered and everybody could be charged for every kilowatt t h e y used. Tesla pointed out that electricity was free in the atmos - phere, a free gift of God to his people, but such idealism natur- ally could not penetrate the thinking of the financier.

If today we demand Tesla's invention of wireless electrical dis- tribution, we can still have all the electricity we want by merely sticking up a little antenna on our homes and other buildings. But

this is the catch.....Tesla's anti-war machine is based on the same idea -- it requires no poles, no wires, no reflectors, no platforms, no micro-wave towers, no walls nor fences.

Now, if we are to have this New Age cake, we will naturally want the frosting too. This means that we can have protection along all national boundary lines without a single wall, wire, tower or any similar device. It also means that we have no further need for any kind of poles, towers, cables, reflectors or wires for electricity, telephones, telegraph, radios or television. Then, since we would have national boundary protection, and positive protection for all coasts, we could do away with the army, the navy, and the marines.

If you have doubted that Tesla was a Venusian, this is a fairly safe spot to cast aside your doubts. And if you will reflect upon this report you will realize that the space people mean business. They are collaborators with the Creator of the Universe, a n d when they tell us to give up warfare they mean for us to give up warfare! Many persons have been murmuring: But how could we give up warfare, with those awful Communists ready to attack us?

The space people have a huge space station which orbits the earth, and which cannot be tracked by radar (another Tesla invention which will be mentioned later.) The reason is because the space station is equipped with extremely delicate instruments which might be damaged by radar. These instruments not only record all words spoken upon the earth, but they also record all thought patterns. The murmurings mentioned above naturally came to the attention of the space people, and they want to know why we are concerned about other nations attacking us when we are free to use the Tesla in - vention any time we wish. Not only along our own borders, but along all borders, so as to quiet all fears which make for aggression. This invention is not something to be kept secret. On the contrary, we must insist that all nations use it for mutual protection.

Although it is called an anti-war machine, it is not, properly speaking, a machine. It is more like a magnetic or polarized curtain of air. For your information a similar protective vibratory curtain has been in operation for thousands of years in certain places on this planet -- areas regarded as sacred or holy places. This very weekend, May 12th, at the time of the Tauras Full Moon, the annual Wesak Festival is being celebrated in the Wesak Valley in Tibet. During this ancient ceremony, performed each year in the Wesak Valley, Gautama, the Buddha comes back to the earth for one day from his present home on the star Sirius. He returns annually to greet his friend and collaborator, the Lord Maitreya, the Christ, together with the assembled Masters of Wisdom w h o constitute the Spiritual Hierarchy on this planet. The Wesak

Valley in Tibet has been guarded through the centuries by an invisible magnetic curtain. No human being ever finds his way into this sacred valley unless he is a person of goodwill, a soul dedicated to t h e welfare of humanity. According to the Divine Plan for this solar system, the time has now come when this entire globe is to become a Sacred Planet; that is why the space people are here to help us, to bring about a state of heaven on earth, for on a sacred planet there can be no warfare; there cannot even be a consciousness of ill-will in the minds and hearts of the inhabitants.

We have mentioned radar, and it is important that we consider this for a moment. Let us clearly understand that scientists and technicians all over the world have never underestimated the Tesla inven - tions. Many scientists regarded them with humble admiration; b u t alas, very often they have been evaluated in an atmosphere strongly tinged with a lurid green shade of envy. Efforts have been made almost constantly, even during Tesla's lifetime in a physical body, to "grab-off" his ideas and try to copy them -- at a handsome profit, of course. Tesla invented genuine radar as a part, a very small functional part, of another invention, the anti-war machine. H e never intended that radar should function separately, isolated from the anti-war machine.

After the anti-war machine was rejected, some of the scientific minds of our country tried to develop, from hearsay, a small por - tion of the original invention. They did not have the necessary facts and the result is radar as we know it today. Scientists admit that it does not work very well. It works just as well as an automobile tire without a wheel; it works as well as an electric light without a light bulb. What more can anybody expect from a fragment of a piece of a machine that was never built?

In 1938 Tesla announced that he had developed a method for inter-planetary communication.

When Tesla died in 1943 this country was at war, and his papers were removed from the safe in his room and sealed by government authorities. Nothing more was heard of his work in this country except for the valuable information contained in a biography which was published in 1944 -- a book entitled "Prodigal Genius" b y John J. O'Neill, then science editor of the New York Herald Tribune. O'Neill has since died. As a reporter, O'Neill had long been an acquaintance of Tesla's, but Tesla had never taken O'Neill into his confidence, because O'Neill did not have a sound background in occult studies. He very much desired to probe the ancient mysteries, to study the philosophy of the East and the Ageless Wisdom, and he recognized Tesla as a man whose mind was more at home on the esoteric plane than on the physical plane. Tesla himself never worked freely in physical matter. His machines were all designed

in the ether, for he was completely clairvoyant. He not only designed and molded his machines in etheric substance; but he tested the etheric models and made any adjustments required. He never made any notes, drawings, or specifications, for he had the power of instant recall. Only in later years, when he was preparing to shed his physical form, did he write out notes and specifications for the aid of his engineers who would continue his work on the physical plane.

Tesla had long been in communication with New York's pigeons, our rock doves and wood doves. Every esotericist knows that doves are Initiates of the bird group; carrier pigeons are used to carry messages on the physical plane, yet the mass mind does not seem able to grasp the fact that doves have always been used on this planet for communication between human beings in physical form, and entities on higher planes. This is true even today, despite the fact that everyone is familiar with the story of Noah sending forth doves from his Ark. It was around the year of 1940 when Tesla, in the presence of a witness, told O'Neill the beautiful and magnificent love story of his life -- the love of Tesla for a certain dove, a pure white female with light grey tips on its wings. It was this dove that flew into Tesla's room in the dark of the night, and told Tesla that she would not come to him again for she was going to die. Then there came beams of light from her eyes, a powerful, dazzling, blinding light, a light more intense than Tesla had ever produced in his laboratory. After the dove's visit, Tesla knew that his own work on the physical plane was to end shortly, and he may have known also that O'Neill was even then living out his final days in a physical body. At any rate, it was O'Neill's great privilege to hear the story of the dove, but later he stated that he would have regarded it as a dream experience, had witnesses not been present. But O'Neill's esoteric knowledge was so limited that he missed the significance of the story. Later, when he wrote "Prodigal Genius", he said that it was Tesla who did not understand the symbolism of the dove.

When Tesla died in 1943, O'Neill assumed that the work of the superman was over; he stated that Tesla left no "disciples" to carry on. But Tesla left many disciples; many close associates to whom he entrusted all his important notes, drawings, and secrets. The papers left in his safe were purposely placed there to satisfy idle curiosity. Nothing of importance was allowed to fall into greedy hands. He left complete instructions for the building of the machinery for interplanetary communication. The machine was built after his death and placed in operation in 1950. It will not pick up any broadcasts from radio stations on earth, but is designed to received broadcasts from space ships, and can be equipped to received from other planets if that should become necessary. When Tesla left instructions for the building

of the machine, he said that some day in the near future space ships would be approaching the earth, and it would be nice to have t h e machine so that we could talk to the space people.

After the machine was placed in operation, broadcasts were received frequently from space ships, and then shortly thereafter the space ships landed near the home of the owner of the machine. The space visitors were made welcome, and now they frequently visit and chat with the Tesla engineers. The first space ship which landed was 700 feet in diameter, 300 feet high, with a center tube fifty feet in diameter. It held 24 smaller ships, 75 to 100 feet in diameter, and it came from Venus.

It seems apparent that persons who are contacted by space people are usually assigned to some certain phase of the work -- something for which they are equipped. Also their work on behalf of the space people seems to follow a certain pattern determined by the space people themselves. For some reason the Tesla phase of the work is just now beginning. Those involved in this particular project are now being placed in communication with each other, and the space people want the inventions developed -- but they want them developed in response to a voiced demand from the earth people. Remember that we have to use our free will to get things accomplished. God will work with us, but He will certainly not work for us.

The space people regret that we sit back and wait for our governments or experts or authorities to thrust some development upon us -- -- just anything at all -- from chemical fertilizer to a full-scale war. The space people insist that we search our hearts, ask Divine guidance, determine our needs, demand, and then gratefully receive. Let us demand whatever we need to live as free and joyous children of God! Let us demand whatever we need to carry out the Divine Plan of establishing God's Kingdom on the Planet Earth!

Any reproduction from this report, in whole or in part, must bear the proper acknowledgment. Brochure - 10 pgs.- .25,-from M. Storm.

"PICK THE BONES OUT OF THIS"

(From "URANUS", June, 1957 -- Vol. 3, No. 6) -- "... We have said once in this magazine that if we are to make any further progress towards a solution of the Saucer enigma, we must study reports of landings and purported successes in communication with the intelligences behind the operation of the Saucers. It is with this view in mind that we reprint an article which first appeared in 'Le Courrier Interplanetaire' some twelve months ago. Your editor considers the story a littel 'shaky' on one or two points and has written to the party concerned in an attempt to clarify the apparent discrepancies in the account. We invite readers to pass their opinions as to the probable authenticity of the story." (Editor "URANUS")

"The account is related by Mr. Enrico Bossa, an Italian architect and pilot of the second World War who now lives in Venezuela.

"'On 15th of May 1950 I was travelling alone in my car through the desert land of the pampas and at the time of the incident I was in a position about 280 kilometres from Bahia Blanca. I was thinking about business matters and didn't pay much attention to the silvery object on the ground to the left of the road and some 300 metres from the road. As I approached nearer I began to notice some details, I saw portholes and translucent dome. When I was only 50 metres away I stopped the car and scrutinized the object from within, I could see no sign of life and it occurred to me that I might be looking at the wreckage of a crashed plane; the strange form of the object, however, precluded this being the case. I did notice that as the clouds passed over the sun, the sunlight produced a strange effect on the surface of the object.

"'I left the car and approached closer on foot and when only 10 metres away realized I was standing in front of a Flying Saucer. By an effect of my subconscious I suddenly felt full of joy and audacious spirit which one acquires in some circumstances -- I found the door open and did not hesitate to enter.

"' Before entering, however, I did notice several details. It (the object) was about 10 metres in diameter and was composed of two distinct parts. The bottom was in the form of an upturned saucer and the upper one cylindrical and covered on the top by a dome, above thedome appeared a strange spherical 'lantern'. Its total height was about 4 metres and the portholes, which exact number I did not count were rectangularly shaped with rounded corners. The object was lying on the ground inclined at an angle of something like 20 degrees, and was supported by a slight rise in the ground.

"'The surface was the color of polished chrome and like one sees in a curved mirror, I could see my reflection and the reflection of the sky. It appeared lifeless, no noise or vibrations. The door at the foot of the cylindrical tower was open but I thought I might have difficulty in climbing the bell-like bottom section of the object, but just in front of the door the surface was roughened. The bottom edge of the 'bell' was slightly worn, I stepped over the rough surface and had to lean forward to keep my balance for I had to walk a distance of some two metres to the door. The size of the door I estimated to be some 1 metre 20 cms (4 feet) high and 90 cms (w feet) wide. I could smell garlic when I put my head inside but could see little at first, it was so dim. I went inside and found the floor level two feet below the door and it gave beneath my weight. My sight improved and I saw the cabi to be about six feet ten inches high, completely circular and rather dark in color. The panes in the portholes were very thick and appeared to be made out of something resembling plexi-glass. In the center of the cabin was a man about 1 metre and 20 cms tall dressed in a grey overall, he was set rigidly in a strange chair. He had sparse, fair hair and his head was bent over his breast. His hands, which were the color of tobacco, were still gripping what appeared to be two control handles protruding from a box, his face had the same color of his hands. He appeared perfectly normal in proportion, that is to say he was not a dwarf -- I touched his arm -- it was rigid and cold. I noticed then that he was in no way attached to his seat.

"'The black box in front of him had rows of 'magic-eyes', below the box was a large horizontal band with a vertical needle and on the band itself were strange signs. To the right there appeared a circular disc looking just like a switched-off TV screen. There were two other men in the cabin, lying on divans near the 'wall' and obviously dead -- their eyes were wide open and held a terrified expression, their mouths were wide open and swollen. There was also a third divan, but this was unoccupied and I wondered why the disappearance of this fourth member of the crew made me feel uneasy. The next thing to take my attention was a strange transparent sphere just above the control board, it was about 25 cms in diameter with a flat ring around it inclined at about 40 degrees to the horizontal. A glittering lamp on the ceiling emitted a white orange light and I suddenly realized the 'engine' was alive, thousands of foolish thoughts passed through my head and I was seized with panic, only with the greatest effort was I able to overcome this feeling and restore my calm.

"'I had a last look around the cabin and then walked out once more passing over the roughened surface, as soon as I reached the ground I felt dizzy and realized how heavy had been the atmosphere inside the cabin. I felt frustrated at not having a camera with me and I decided to travel to the nearest village as rapidly as possible, this was about 200 kilometres away but I had friends living

there. I experienced a lot of difficulty in getting my car started, the ignition was affected and the starter would not function. After several attempts I managed to get it going and as I went further away from that spot all traces of trouble disappeared.

"'In the village I met my friends but because the hour was late we postponed our departure until next morning. We experienced difficulty in finding the exact spot the next day, after arriving in the area about 12:45 p.m. My attention was shortly attracted to a mound of reddish ashes about 2 metres high and 5 metres in diameter. The ashes were smoking slightly and when I touched them I judged their temperature to be about 40 degrees centigrade. Then one of us looked upwards and saw a Saucer, we estimated it to be at 600 metres altitude, I took a picture with the camera I had taken along, then above this craft another one, and immediately above this we saw a stationary 'cigar' shaped craft. The two Saucers climbed diagonally towards the cigar itself inclined towards the direction in which the Saucers were travelling.

"'In a few seconds they joined the cigar in which they disappeared. At the same moment the space ship acquired speed in a terrific burst of acceleration, we estimated its speed to be 12,000 kph."

- e n d -

EXCERPTS: From the address by Congressman Chet Holifield, Chairman of the Special Sub-Committee on Nuclear Radiation, from the floor of the House:

"... The genius of man in the arts of mass destruction has produced a new bomb, sometimes called the "Super" bomb. This new bomb differs from the atomic bomb in two respects: First, it can produce hundreds and even thousands of times more radioactive material; and second, its explosion hurls this debris so high into the air that it is dispersed to the four corners of the world. I mean that in quite a literal sense...."

"Not all atom fragments burn out so quickly What concerns us are the live ashes of atomic fires. An exploding nuclear bomb breaks matter into possibly two hundred distinct species of atomic fragments from about three dozen chemical elements. One of these elements is Strontium 90. .."

"The world has witnessed almost 120 bomb tests so far. That's almost one for every month since World War II. And a single bomb test today can be the equal of a thousand Hiroshima-class bombs.

"It is against this background that we must view the problem of evaluating the radiation risk from Strontium in humans. This brings us to the third phase of the problem as I have outlined it...."

A POINT OF ORDER -

A most welcome and friendly letter from Professor M.K. Jessup, too late for quotation in full in this issue, includes one comment which I am anxious to correct. "I do believe," he writes, "that the BSRA is over-anxious to put all UFO phenomena into the etherical group. I do not believe we have gone far enough into UFOlogy to offer all-inclusive explanation or draw fine lines of demarcation, or that our sources of information are sufficiently proven to accept without reservations.. .."

We have repeated many times in print, especially during the last two or three years, that the UFO phenomena are enormously complex, that no single and simple interpretation could apply to all of them, a n d that the etheric hypothesis applies especially and with great force to the huge mother ships which are capable of "crossing" interstellar "spaces" of many light years. We have also stated that it seems possible, even probable, that some types of smaller UFO are either made or based in Arctic regions, perhap s within the globe, perhaps in the Himalayas, perhaps in almost inaccessible tropical areas. These suggestions do NOT invalidate the etheric interpretation - which is not propounded in any all-inclusive and dogmatic manner of thinking.

This is not an argument, but only a corrective memorandum, and as such I respectfully call it to the attention of another distinguished writer and friend, Mr. Arthur Constance of England, and of the Editor of the widely read "FLYING SAUCER REVIEW", The Hon. Brinsley le Poer Trench. Like most of our critical-minded Associates in America, they cannot desire anything but the most accurate and clear-cut state - ments possible: "rari nantes in gurgite vasto".

THE INVISIBLE POWERS

by N. Nicolaides

The Spectra of all stars with mixed colors are identical in every respect -- number, size and arrangement of the seven colors.

The theory that the red line at the bottom of all these stars is caused by vapors of carbon confined in a separate spot (space) for millions of years, the orange next by calcium, the yellow by sodium and so on, clear to violet (hydrogen), always at top, is absurd, because out in the open elusive vapors or gases always intermingle, especially if disturbed, as it happens in the Sun, due to the terrific explosions of sunspots! Even if they could remain in spots, anybody can see that elusive elements could never be arranged in such an identical manner, but the number, size, shape, and arrangement of the spots would differ for each star, thus each star would have had a mixed spectrum of its own!

Astronomers all over the world ignore this writer, yet We the People who are footing all bills must know why they cannot answer these simple questions! Here is one -- "Why is carbon (red) always at the bottom, and hydrogen (violet) at the top (polarity of light)? Or, if the earth and the moon were in a fiery state, could they have identical mixed spectra? Never! Or, if given a number of gaseous bodies could they reproduce self-luminous identical mixed spectra? Never! Indeed, their theories are far from sound!

As on earth thus in the star's atmospheres, the vapors and gases are found in a confused state, but as to the origin of the seven bright lines, such a similarity could never come from elusive elements, but only from identical outside influences.

The seven bright lines are due to the attraction of seven cosmic ray fields or waves, each of distinct vibration - bombarding these stars (the seven lamps of the Revelation). They are the cause of the rays, spectra, sunspots, magnetism, etc. Due to them also our Universe functions like a huge electro-magnet (two star streams at reverse directions).

Read also about the harnessing of the centrifugal force of the fly-wheel of an air compressor, for whose creation no power i s required at top speed. Both subjects so simple and self-evident that no one will ever attempt to disprove.
